

Nature of Research

Arjay B. Arcena, LPT, PHD-AL

Definition of Research

- It is derived from the old French word, "cerchier" which means *to seek* or *search*.
- Thomas and Nelson (1996) said that *"research is a careful and systematic means of solving problems"*.

Definition of Research

- Merton (n.d.) asserts that *research contributes to the development of theory. It clarifies concepts; it initiates; it reformulates; and it refocuses theory".*
- Wiersma (1995) states that *"research is a process, an activity in the search for knowledge through recognized methods of data collection, analysis, and interpretation".*

Definition of Research

- According to Good (n.d.), "*it is a systematic, defensible pursuit of results which will solve a problem. Research is good if it consummated an ordered, reasonable, communicable search*".

Definition of Research

- Aquino (n.d.) defined research as *"the systematic search for pertinent information of a specific topic or problem. After a careful, systematized research for pertinent information or data on a specific topic or problem and after the research worker has analyzed and interpreted the data, he eventually faces another essential task – that of preparing the research reports.*

Essential Factors for Effective Research

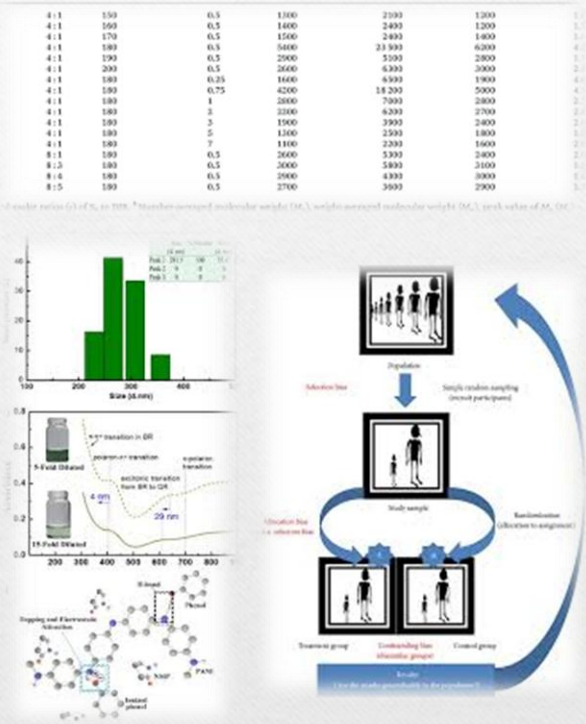

1. Money
2. Materials
3. Men

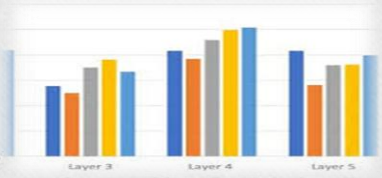

Characteristics of a Good Research

According to **de Leon** and **Claudio,** research:

1. Produces Processible Result;
2. Produces Specific Results;
3. Produces Generalizable Result;
4. Produces Interpretable Result.

Characteristics of a Good Research

According to **Best**, a good research:

1. Gathers New Data;
2. Solves Problems;
3. Develops Sound Theories;
4. Requires Expertise;

Characteristics of a Good Research

5. Involves an Accurate Observation and Description;

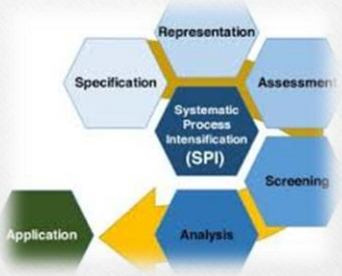

6. Is logical and Objective;

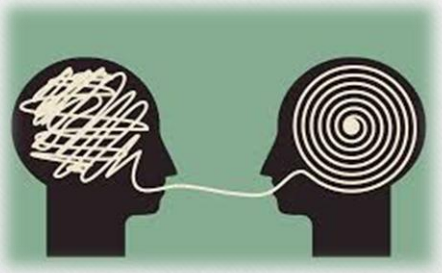

7. Is carefully Recorded and Reported;

Characteristics of a Good Research

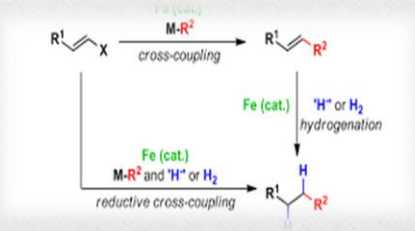

According to **Thomas** and **Nelson** (1996), it is:

1. Systematic;
2. Logical;
3. Empirical;
4. Reductive;
5. Replicable.

Characteristics of a Good Research

According to **Paul Leedy**, a good research:

1. Begins with a question in the mind of the researcher;
2. Requires a plan;
3. Demands a clear statement of the problem;

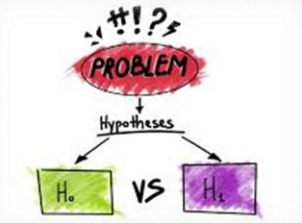

Characteristics of a Good Research

4. Deals with the main problem through subproblems;

5. Seeks direction through appropriate hypothesis;

6. Deals with facts and their meaning;

7. Is circular.

Difficulties Encountered in Research

1. Difficulty of recognizing problems
2. Duplication
3. Indifferences of people to research

A good researcher should be (Calmorin, 2004):

R – Research oriented

E – Efficient

S – Scientific

E – Effective

A – Active

R – Resourceful

C – Creative

H – Honest

E – Economical

R - Religious
